# Cooper Can Outsmart Ticks

## Who Am I?

I am small, usually brown and flat. I have two body parts and eight legs. I live in areas that are wooded, in high grasses like meadows and other areas where small animals build their home. I am a Tick. Although I am related to insects, I am more closely related to spiders, scorpions and mites. We are called arachnids.

I differ from insects in the following ways: I have two body parts while insects have 3

body parts and I have 4 pairs of legs and insects only have 3 pairs of legs. You usually will not see me unless you are playing in the woods or in fields where I live. It is very important that you know what I look like so you can tell your parents immediately to look so they can take me off of you. Do not try and take me off yourself, always show an adult.

## How Does Cooper Outsmart Ticks?

Cooper's Tick prevention program reduces the likelihood of tick entry into the yard by specifically treating the areas throughout the property where ticks are likely to harbor and breed. We evaluate the property and make recommendations to help reduce the type of conditions that favor and promote tick activity. A thorough analysis of the property is conducted to determine the activity pattern of ticks in order to provide targeted treatments. We specifically design the treatment plan based upon the landscape design of your property as well as the overall environment surrounding your property. Using this information, a treatment program is developed. The goal of the program is to treat only the areas where ticks are present and active. Ticks become active early in the spring and remain active until late fall. For this reason tick prevention should begin as early as April, but will control ticks effectively if started any time before fall.

## About Cooper

Cooper Pest Control is a family-owned business that residents and businesses have trusted since 1955. With our team of two entomologists, numerous environmental specialists and a licensed sanitarian, we develop unique programs that separate us from the rest of the pest control industry. From maintenance and prevention services to environmentally-conscious programs, call Cooper and find out why....
